

LEODIVE BOOTS

Our LEODIVE Swim Boots are most models of drysuit, with These boots are designed to expel water post-dive, for additional foot protection (after diving) on a boat deck or back on land.

designed to be used with neoprene socks.

Equally, they are ideal (for diving/snorkelling in warmer waters) when traveling to a dive site, as they can be worn without additional socks and fins can be directly fitted over the boots. Providing extra foot protection over rocks, gravel, sharp stones, etc. when accessing remote diving and snorkelling sites and with the convenience of not needing additional wet boots to use with fins.

These boots are also available with a reinforced toe cap and midsole, which conforms to EN ISO 20345:2004 (for performance and quality).

The vibrant red color on the bottom part of the diving shoe boasts unique characteristics that make it stand out. This color enhances underwater visibility by increasing contrast and clarity, aiding the user in exploring the marine environment with greater ease and precision. Additionally, the bright red color provides a visual marker for fellow divers, facilitating communication underwater and enhancing safety. Moreover, it adds an attractive and distinctive look to the diving shoe, making it an ideal choice for adventurers who want to stand out stylishly while indulging in their underwater pursuits.
